Riley Breske

Santa Rosa Beach, FL | 301.399.0419 | rileybreske@outlook.com | RileyBreske.dev

SUMMARY

Computer Science student at Auburn University with 7+ years of professional experience spanning software development, digital operations, and data-driven environments. Team USA Olympic Weightlifting member and 2x National Champion — bringing elite discipline, consistency, and a results-oriented mindset. Proficient in full-stack development, cloud architecture, and Agile practices. Eager to contribute immediately and grow within a technology-forward organization.

SKILLS

Languages	C, C++, Java, JavaScript, TypeScript, Python, PHP, SQL, R
Frameworks	React, Next.js, Node.js, NestJS, Spring Boot, Drizzle ORM, pandas, scikit-learn
Databases	PostgreSQL, MySQL, SQLite (Cloudflare D1), Supabase
Cloud / DevOps	AWS, Cloudflare Workers, Docker, Vercel, Netlify, CI/CD, GitHub Actions, OAuth2/JWT
Systems / Tools	Linux (CentOS, Ubuntu), OS/161, Sys/161, gcc, gdb, make, vim, VirtualBox, Git, GitLab

PROJECTS

Pool Shark — Field Operations App Nov 2026 – Present

Mobile-first PWA in production for a pool service company (owner + 4 technicians, ~300 pools), replacing texts and a paper notebook. Built with Next.js, TypeScript, Cloudflare Workers, D1 (SQLite), and Drizzle ORM; role-based access with Better Auth. Time clock and timesheets, two-day route scheduling with one-date overrides, customer service-report emails with photos via Resend (idempotent retries), and equipment repair tracking. Versioned migrations, offline support, and 136 automated tests against a real database.

Operating Systems Kernel Projects — Auburn University (CPSC 3500) 2025–2026

Implemented lock and condition variable synchronization primitives in the OS/161 kernel, applying them to solve a multi-threaded concurrent resource-sharing problem involving race conditions and deadlock avoidance. Separately designed and implemented a CPU scheduler supporting FCFS, Round Robin, and Priority scheduling policies via event-driven simulation on a CentOS/Linux environment. Tools: C, gcc, gdb, make, vim, VS Code, OS/161, Sys/161, Git.

Roster Recap Aug 2025 – Present

Serverless Next.js platform integrating the Sleeper REST API into Supabase (Postgres) via Edge Functions and Vercel Cron. Engineered relational schemas and idempotent upserts for secure multi-tenant data. Applied ISR caching for performance and scalability with planned Twilio SMS integration. Emphasizes cloud architecture, OAuth2/JWT security, and API-driven workflows.

Portfolio Site Sep 2024 – Present

Responsive React/TypeScript portfolio with REST API integration for dynamic content. Implemented CI/CD pipelines via Netlify and GitHub Actions, secure HTTPS (TLS/SSL), and automated testing. Designed with modern UI/UX, accessibility, and SEO optimization.

ProfilerV2 Jun 2024 – Aug 2024

Full-stack Next.js/TypeScript application using Supabase (PostgreSQL + RLS) for authentication and secure data storage. Designed REST APIs and caching strategies delivering real-time athlete readiness dashboards. Deployed via Vercel CI/CD and GitHub Actions with automated testing and version control.

MashElite.com Nov 2023 – Apr 2024

Led redesign and deployment of an e-commerce site using WordPress + WooCommerce REST APIs hosted on AWS S3. Improved UI/UX and checkout flow, driving a 250% MoM sales increase. Implemented CI/CD workflows, SEO optimization, and TLS/SSL security.

Political Party Classification — Random Forest Nov 2023

Machine learning classification model in R using Random Forests with feature selection, regression, and cross-validation. Achieved 99.8% accuracy and AUC = 1.0. Built reproducible pipelines for data preprocessing, model training, and evaluation.

Exploratory Data Analysis: Airline Delays Aug 2023

EDA on flight delays using R, ggplot2, and regression models. Identified 97% correlation (R^2=0.95) between day-of-week and average delays, disproving flight volume as a predictive factor. Produced visualizations and statistical insights demonstrating data storytelling and pattern recognition.

EXPERIENCE

Grocery Replenishment Specialist Aug 2024 – Nov 2026

Publix Santa Rosa Beach, FL

- Optimized replenishment workflows by analyzing stock rotation patterns, reducing out-of-stock frequency across high-volume departments.
- Collaborated with managers to streamline replenishment schedules, consistently meeting daily productivity goals.
- Mentored new associates on procedures, product rotation, and safety protocols.

Digital Media Manager Oct 2023 – Aug 2024

Rise Indoor Sports Advance, NC

- Built and maintained riseindoorsports.com using WordPress + WooCommerce, improving monthly visits by 200%.
- Integrated APIs and third-party systems (Constant Contact), managing full-stack development end-to-end.
- Applied data analytics to social media and email campaigns, driving +1,500% engagement through iterative optimization.
- Designed brand assets using Adobe Illustrator and Photoshop; coordinated cross-functional teams using Agile practices.

Strength & Conditioning Intern Jun 2022 – Aug 2022

Lenoir-Rhyne University Hickory, NC

- Designed training programs for collegiate athletes using data-driven performance metrics (speed, strength, recovery), applying iterative refinement similar to Agile sprint cycles.
- Educated athletes on technique and safety, developing ability to communicate technical concepts clearly to non-technical audiences.

Health Enthusiast Feb 2022 – Nov 2023

The Vitamin Shoppe Hickory, NC

- Gathered customer requirements, identified trends, and mapped them to product solutions — mirroring requirements analysis in software development.

- Simplified complex product information for customers; contributed to onboarding and training of new employees.

Account Merchandiser Aug 2016 – Jul 2021

Pepsi Tuscaloosa, AL

- Managed inventory and product placement across multiple high-volume retail accounts, developing workflow optimization and logistics planning skills.
- Analyzed sales trends and customer demand to drive data-informed replenishment decisions.
- Coordinated with store managers and distribution teams across cross-functional operations, consistently meeting tight productivity goals.

EDUCATION

Auburn University Aug 2021 – Present

B.S. Computer Science · GPA: 3.48

- Dean's List — Fall 2025, Spring 2026
- Member, Society for Collegiate Leadership & Achievement (SCLA)
- Coursework: Data Structures, Algorithms, Programming Languages, Web Design, Database I & II, Principles of Software Design, Discrete Structures, Operating Systems
- Olympic Weightlifting Athlete — 2x National Champion, 1x International Medalist (Team USA)
